

corporate profile

Technology that makes the world go around

Dynamism, which is the ultimate expression of the relationship between space and time, is the driving force behind the Rulmeca Group's ethos and mission. For over 50 years Rulmeca has been committed to transforming the principle of dynamism into real business benefits for our clients.

Our every action is geared to maintaining our position as the world's leading manufacturer of components and solutions for the conveying of bulk materials.

Striving to become your preferred partner

4

Through applying our vast knowledge and expertise in all areas of conveyor components, as well as our commitment to offering the lowest total cost of ownership in the industry, we are constantly striving to be your preferred long-term partner in bulk materials handling.

For more than 50 years, Rulmeca has focussed on developing products that deliver superior performance and consultancy services that significantly enhance our customers' competitiveness. With our ability to add value we aim to become an extension of our customers' organisations, working hard to forge close partnerships. Drawing on the unmatched experience gained by our Rulmeca, Melco and Precismeca brands, we have been successfully involved in consulting, project planning, designing, installing, commissioning and supporting many large applications across the globe.

All the benefits of Rulmeca's global experience combined with in-depth local knowledge combine to deliver a world-class service.

Globalisation has for many years been an integrated part of our identity. With our manufacturing strategically placed in Europe, Asia, Africa and the Americas, we offer competitive products that meet the highest international standards as close to our customers or project site as possible. Locally we have the necessary commercial, product and application knowledge required to provide a full consultancy service, ranging from planning of new projects to aftermarket and troubleshooting. The "glocal" advantage sets Rulmeca apart and gives our customers the edge.

Synergy delivers excellence

8

A unique synergic relationship between independent companies in the Rulmeca group harnesses and makes available a wealth of shared knowledge, expertise and ability.

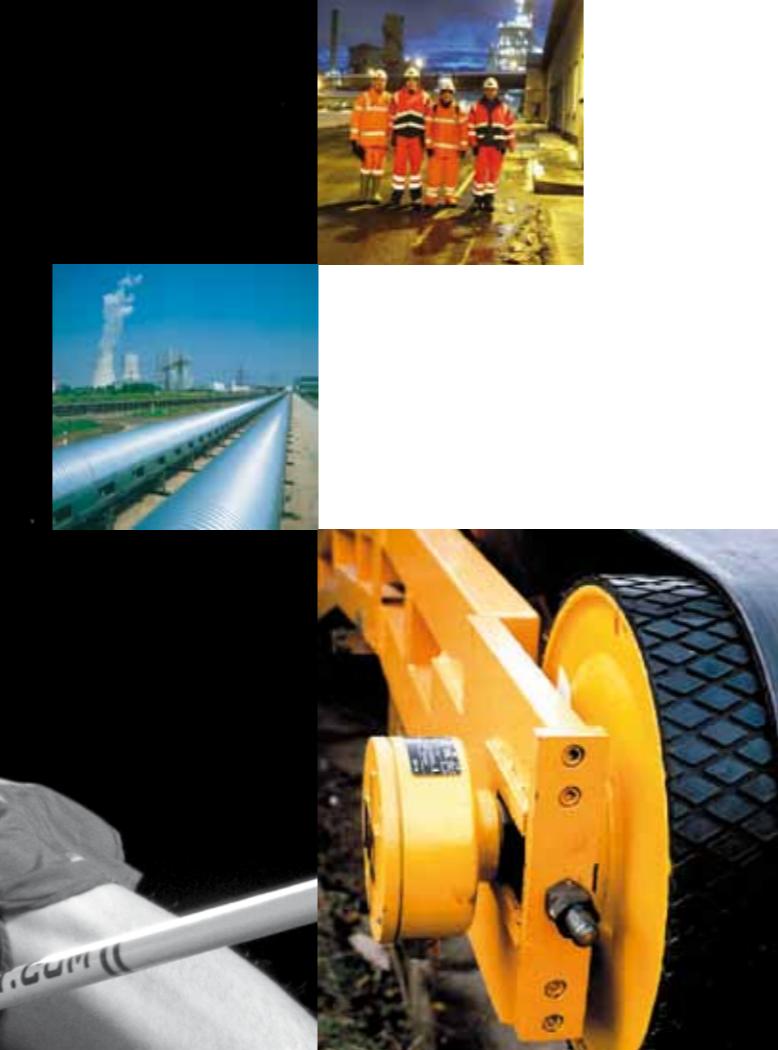

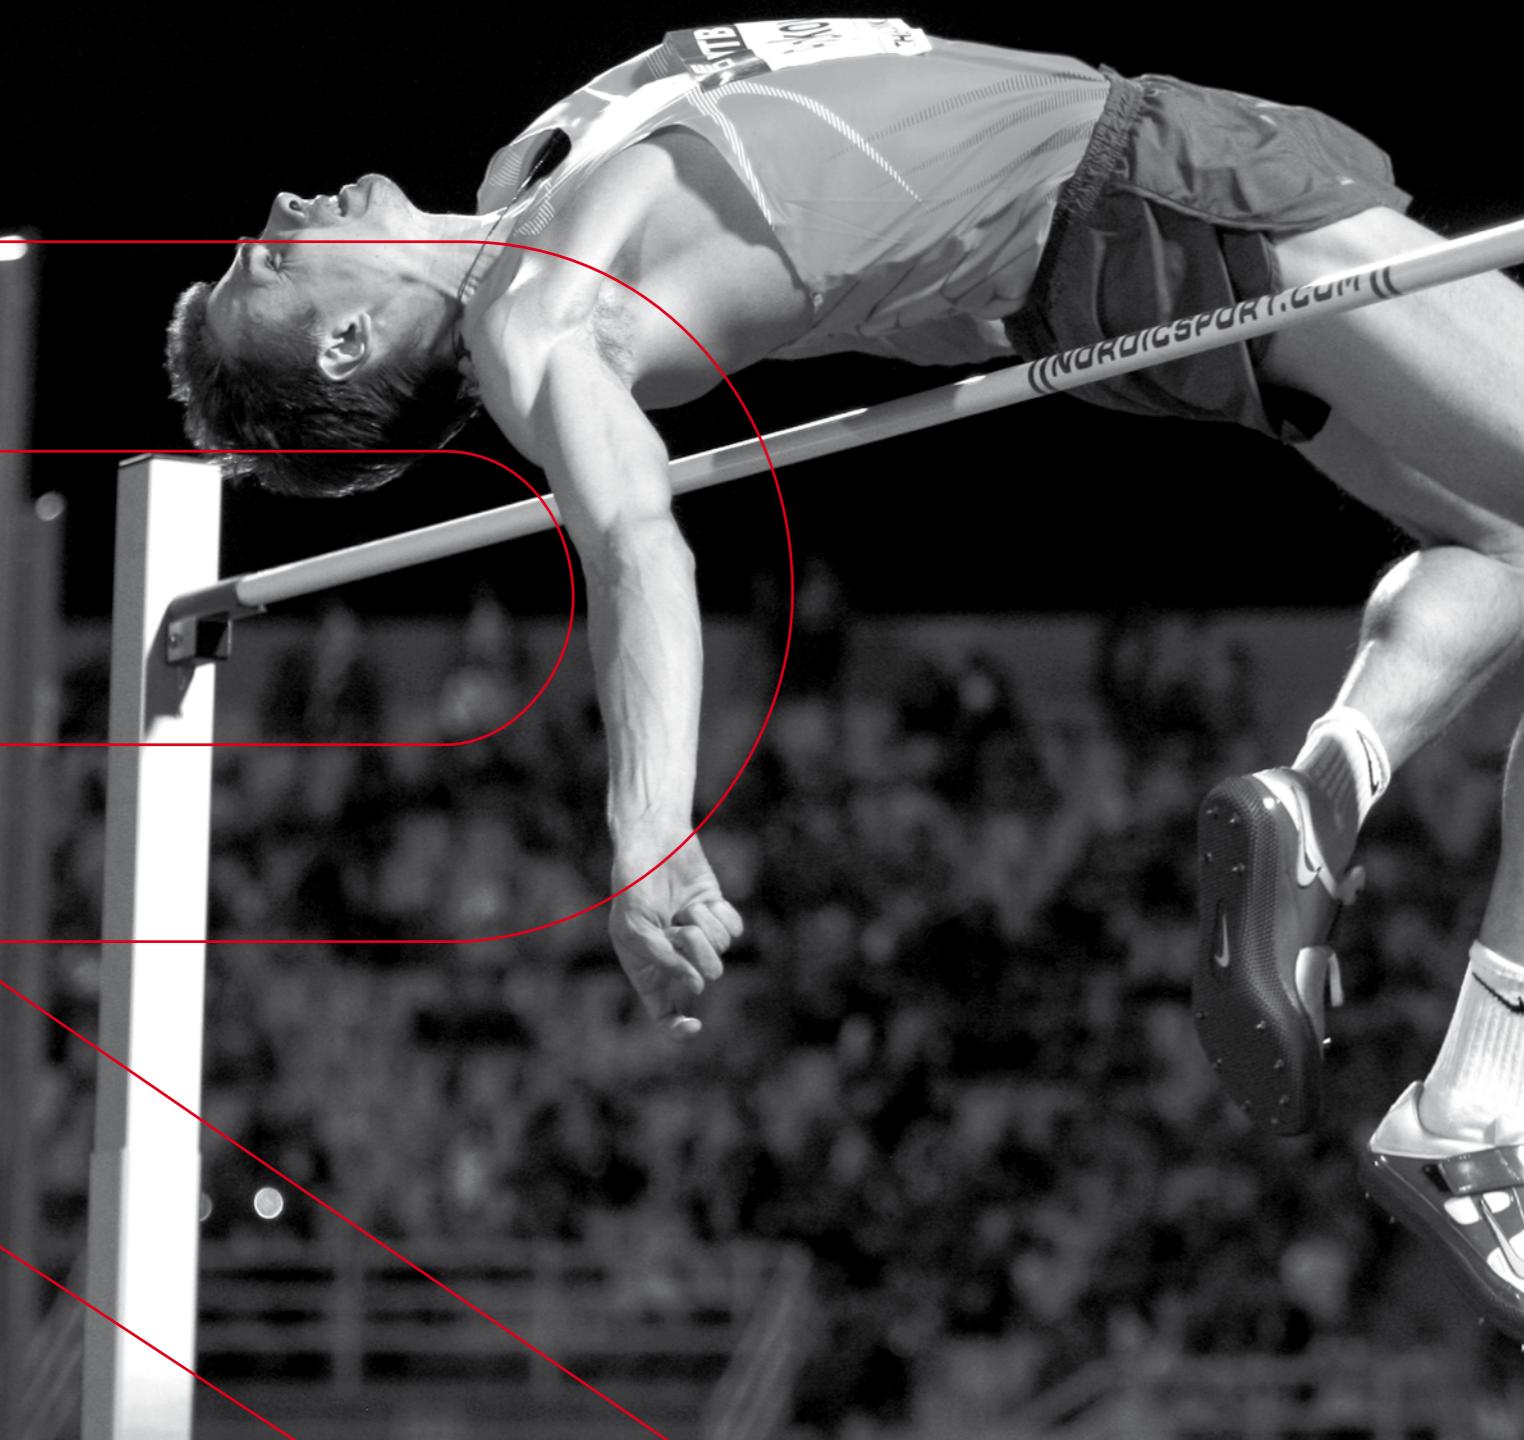

At the core of Rulmeca's high-quality products are 3 brands steeped in history, innovation, international development and research. Founded in 1962 by the entrepreneurial Antonio Ghisalberti and still guided by Emilio Moreschi (Group President), RULMeca S.p.A. has been able to harness and employ the experience and expertise acquired by worldwide expansion. Today the Rulmeca Group of companies consists of more than twenty companies that provide manufacturing, sales and distribution capabilities to most of the major global markets and the **Rulmeca**, **Melco** and **Precismeca** brands are globally recognised for excellence.

3 realities
group

values

competitiveness

Our guiding principles:
Best-in-class quality,
product innovation, product
development and solutions.

Rulmeca is a quality-driven company that always seeks to obtain the highest international certification. This uncompromising approach to excellence and attention to detail results in advanced products that offer unbeatable performance, reliability and value. By investing in product development and encouraging a culture of innovation, Rulmeca is able to consistently grow its product range to meet the evolving needs of our partners and customers.

Our values lead to improved
competitiveness

Our skills are based on people

We allocate the best and most appropriate individual skills to all teams, so that on any given project we can assure our clients that they will receive the finest service and the optimum outcome.

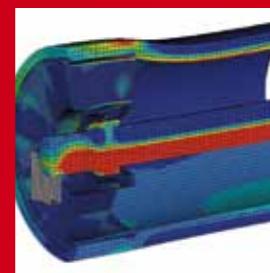

We recognise that we can only grow as a company if our people can grow. By placing a high value on developing, recognising, rewarding and sharing the skills of our staff we strive to build a team of professionals who are dedicated, passionate and enthusiastic. We believe that this culture is the essential foundation to producing products, solutions, services and relationships that meet and exceed the expectations of our clients.

skills
people

Research is just the starting point

Ongoing and significant investment in R&D, led by constant input from our customers and partners, is how Rulmeca stays at the forefront of the global bulk handling industry.

Together with leading mining companies, Rulmeca is constantly researching the areas of health & safety, high speed applications, lower noise, energy optimisation, CO2 reduction, cost of mining and maintenance to ensure that our development programmes are based on evolving industry trends and key market drivers.

technology

rulmeca

Our
technology
is the result
of targeted
choices

Our expertise in design consulting, our certified quality policy and our ability to provide precise solutions ensures outcomes that meet and exceed our customers' expectations.

Market demands for improved efficiency and higher throughput do not allow for unnecessary maintenance stops or breakdowns. The selection of quality rollers and motorised pulleys, therefore, is more vital than ever to ensure a long, trouble-free conveyor lifespan. The result of Rulmeca's total quality philosophy is evident in the expansion of the group as global market leader. From research and development through to the final product, the Rulmeca Group's commitment to quality is always evident. This has led to a group-wide policy oriented toward continual investment in manufacturing and technology, in the quality of the materials used, and in research and development.

18

19

You have the application!
We have the product!

Rulmeca products are installed throughout the world in a variety of climates and environments. Designed to operate in extreme temperatures and under harsh conditions, they have functioned outstandingly in a multitude of circumstances ranging from conveying light duty gravel to heavy duty applications.

- > QUARRYING
- > FERTILIZER, SUGAR, SALT PLANTS

Since 1962, Rulmeca has been supplying conveyor components for the bulk handling industry and today is the global market leader in rollers and motorized pulleys. Rulmeca works internationally with leading OEMs, Engineering Companies and End Users Groups in the major applications within the handling of bulk materials, such as: coal and lignite mining, cement, quarries, tunnelling, power plants installation, ports, salt and fertilisers, sugar plants, recycling and demolition, crushing and screening etc...

rollers

rulmeca

Our Rollers improve productivity

Rollers and Idler sets with outstanding reliability and maximum lifetime from Rulmeca, Precismeca and Melco - worldwide they are considered the best for bulk handling.

With more than fifty years' experience in belt conveyor applications, Rulmeca has constantly grown its product range, whilst developing solutions to meet any specific application requirement. In other words, a constant evolution is in progress. The state-of-the-art techniques used in design and construction mean that top performance levels are gained even in the harshest operating conditions.

Rulmeca Motorized Pulleys

Highly efficient drives
for Belt conveyors

22

Unique space saving design, energy efficient, reduced maintenance, low noise levels. "Fit it and forget it" is a slogan given to our Motorised Pulleys by our customers!

First produced in 1953, Rulmeca Motorised Pulleys quickly became the reference technology in the sector. The purpose of the original project has been fully achieved and positively confirmed over the time: to provide an extremely compact motorised drum, totally enclosed and highly efficient, able to withstand dust, water, oil, grease and harmful substances, fast and easy to install and virtually maintenance-free. Today, Rulmeca Motorised Pulleys are considered among the most reliable and efficient belt conveyor drums available anywhere in the world.

Our
solidarity
is corporate
culture

25

We believe that beauty is present in art, as well as in the life of every person.

RULMECA has always promoted the protection and preservation of heritage, an area often neglected in the modern world. We apply this same care and sensitivity to social development, with projects that aim to promote the work and development of areas that have their own potential growth, and which need to be supported and encouraged. At the centre of each choice are people with their sensitivity and their desire to direct their own present and future towards the beauty of life, understood as elevation of spirit and human dignity.
